

## North American Stock Photography List

September 1, 2018

The following is a list of subjects of which I currently have photos available. All photos are sharp, well-exposed and carefully edited. I strive to have a variety of compositions available, and to ensure that each species is represented by multiple individuals whenever possible. All photos are of wild animals in their natural habitats, and are taken according to a high level of ethics. Previews are available upon request, and can be sent to you via email or uploaded to a private web page for viewing. Final images are delivered as high-resolution JPEGs, or in other formats as requested.

This document is searchable by common or scientific name using the 'CTRL + F' function. As my collection is always growing, new subjects are constantly becoming available. If you do not see the photo you need, please contact me! I may be able to acquire it, or recommend another photographer that might have what you're looking for. I am always happy to work with you to meet your photographic needs.

All photos are taken with modern, 12MP or 18MP digital Canon cameras and professional quality lenses. Photos are available for use free of charge for educational organizations, conservation groups or other environmental non-profits. Usage fees will apply for other applications.
